

許珮萱

國立中央大學 | 資訊工程學系 碩士畢業
桃園市平鎮區 | 無工作經驗 | 希望職稱：資訊工程類

個人資料 女、26歲
就業狀態 待業中
主要手機 0919-785-552
E-mail wonderful102662@gmail.com
通訊地址 桃園市平鎮區中豐路***
聯絡方式 0919785552

學歷

國立中央大學	2022/9~2024/6
資訊工程學系 碩士畢業	
國立臺灣大學	2017/9~2022/1
日本語文學系 大學畢業	

工作經驗

總年資 無工作經驗

求職條件

希望性質 全職工作
上班時段 日班
可上班日 錄取後隨時可上班
希望待遇 面議
希望地點 台北市、桃園市、新北市、新竹縣市、苗栗縣
遠端工作 對遠端工作有意願

希望職稱 資訊工程類
希望職類 軟體工程師、韌體工程師、系統工程師、演算法工程師、雲端工程師

自傳

Education

- 大二：開始接觸程式設計python
- 大三：自學資料分析 & C/C++
- 大四：自學資工系基礎課程
(包括作業系統、計算機組織、離散數學、線性代數、資料結構、演算法)
- Gap Year：準備資工研究所考試
- 碩一：修課為主
- 碩二：MAPF競賽 & 準備碩論
(碩論題目：multi-robot patrol scheduling with min-max latency on trees)

Course Taken Include

- Python 計算機程式設計
- C/C++程式設計
- 物件導向分析與設計
- 大數據與程式設計導論
- 程式設計與資料分析
- 機器學習
- 類神經網路
- 雲端計算
- 嵌入式系統設計(Arduino)
- 圖形演算法
- 資料庫系統與分析

Contest

- 2022 玉山人工智慧公開挑戰賽
- 2023 The League of Robot Runners

Programming Language

- C/C++
- Python
- Java

Summary

- Started learning programming (Python) in sophomore year.
- Self-studied data analysis and C/C++ in junior year.
- Self-studied fundamental courses in computer science in senior year, including operating systems, computer organization, discrete mathematics, linear algebra, data structures, and algorithms.
- Took a year off to prepare for the entrance exams for a graduate program in computer science.
- Focused on coursework in the first year of the master's program.
- Participated in MAPF contest and prepared the thesis in the second year of the master's program.
(Thesis topic: Multi-Robot Patrol Scheduling with Min-Max Latency on Trees)

Courses Taken Include

- Introduction to Big Data and Programming
- Python Programming
- C/C++ Programming
- Programming and Data Analysis
- Machine Learning
- Cloud Computing
- Embedded System Design (Arduino)
- Neural Networks
- Object-Oriented Analysis and Design
- Graph Algorithms
- Databases

Contests

- 2022 YuShan Artificial Intelligence Open Challenge
- 2023 The League of Robot Runners

Programming Languages

- C/C++
- Python
- Java

語文能力

英文

聽/中等 | 說/中等 | 讀/精通 | 寫/精通

專案成就

2023 The League of Robot Runners

- Multi robot path scheduling problem
- Robot delivery problem
- Design the path planning for multiple robots in different maps and varying quantities to ensure they can reach specified destinations.
- Challenge : real-time、high capacity、no collisions、lifelong scheduling

Handcrafted Neural Network Model

- Handcraft the model based on the mathematical principles underlying the model.
 - Autonomous Vehicle
- The distance between the car's left front, front center, and right front from the wall is sensed by sensors to predict the car's path of travel.
- Design a GUI and demonstrate the experimental results.

Fingertip Pulse Oximeter

Use Arduino and ESP32 board to create a DIY fingertip pulse oximeter that alerts when the blood oxygen level is abnormal.
